

## Software Update Instructions:

1. Download the DBI3FUT zip file, and open it.
2. You will find a file – DBI3FUT.msi. This is a Windows installer program. Install on your computer using Windows 10
3. Two shortcuts will be present on your screen. Delete the one that ISN'T the Version 1.1 update (it's actually 1.2, but don't worry about that).
4. Then, connect your DBI3 to your computer using the charging cord supplied with your unit.
5. Wait three minutes.
6. Go to: Device Manager → Ports → COM 1/2/3/4 (whichever one comes up) → Port Settings → Advanced → Latency Timer → Set Latency Timer to 1. Click OK to get out of the Device Manager.
7. Leaving the DBI3 connected, run the DBI3FUT program.
8. This should upgrade the program to Version 1.2. The program screen will tell you when complete, and whether or not it was successful.
