

## SERVICE BULLETIN-101 HORIZONTAL TANK STRAP ASSEMBLY

It is recommended that a safety cable be used to reinforce the horizontal tank strap fitting. This safety cable need be used on only those fittings which are of the straight type. (See step 1 of attached instruction sheet.) The cable assembly is designed to prevent damage in case the fitting fails

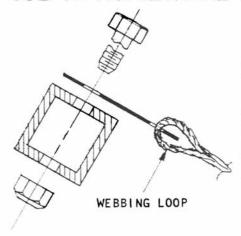

Raven is furnishing the safety cable assembly and including a detailed instruction sheet for its installation.

The instructions are self explanatory and should be studied to determine if you need to install the safety cable.

There have been some reports of breakage in this type of fitting. Therefore, if you have a straight fitting, it is urged that the safety cable be installed whether or damage exists.

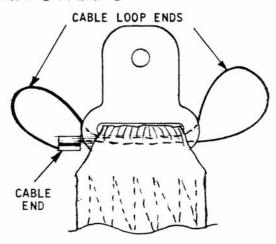

### SAFETY CABLE INSTALLATION FOR USE ON HORIZONTAL TANK STRAPS

# RAVEN industries, inc.

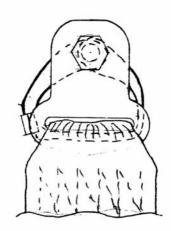

#### STEP I:

DISCONNECT TANK STRAP FITTING FROM FRAME.

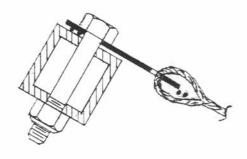

#### STEP

PUSH SAFETY CABLE THROUGH WEB-BING LOOP. LOCATE CABLE END AS SHOWN. (THIS WAY IT WILL NOT INTERFERE.)

#### STEP 3:

INSERT BOLT THROUGH FITTING HOLE AND CABLE LOOP ENDS.

#### STEP

REASSEMBLE TO FRAME AND TIGHTEN.
